## HazMat

We specialize in conducting thorough hazardous material surveys across a wide range of facilities, ensuring efficient and effective assessments. Our licensed team includes asbestos inspectors, mold inspectors, radon measurement providers, and other specialists who evaluate hazardous materials' locations, conditions, and necessary response actions. We work closely with clients to tailor a scope of work that addresses immediate needs, future plans, and any relevant health, safety, and regulatory requirements.

By considering these factors, we ensure that each project is managed with attention to detail and regulatory compliance. In addition to surveying, our experts develop and oversee customized plans for the safe removal, abatement, or in-place management of hazardous materials. We focus on minimizing risks while following best practices to ensure safety and legal compliance.

Once the work is complete, we prepare comprehensive close-out reports documenting all activities, ensuring that clients meet regulatory standards and maintain a safe and healthy environment for all occupants.

### HAZMAT

- Asbestos Consulting and Oversight
- Asbestos, Lead paint, Radon
- Building Contaminants Survey and Abatement
- General Indoor Air Quality (IAQ) concerns
- HazMat Surveys & Abatement
- Inventories of PCBs, Mercury, Freon, and other regulated building hazardous materials
- Moisture/Mold/Microbial contaminants
- PCBs in building materials (i.e. caulks/glazings/paint)
- Residual waste product inventories
